Choure Chat Crack + Free

The entire program is written in C++. It runs on any Windows platform, including Windows 98. It is not platform-specific. The file transfer function works well, regardless of the operating system version. The client-server setup is easy to do. It's just that there's a few little wrinkles to understand, which take a few minutes to get past. No registry entries are made. There are two startup files, one for the server, and one for the client. They must both be edited for the client and server to start working. I have tested this software with Windows 98, and it works. It does not work with Windows ME or Windows 2000. Make sure that your system meets the system requirements. I use Windows 2000. There are 5 images: Features: Choure Chat has several features: There is a 'chat' window, where anyone can join or leave the chat. It automatically keeps track of all the people in the chat, who are online or not. You can search through the chat by typing in a search box in the top right corner. The chat window can show a short 'banner' message, to help introduce yourself to new people. You can open a 'chat room', which allows several people to talk to each other at the same time. It is ideal for a group discussion. It is possible to send files to each other, in a file transfer operation. The software can be turned into a Web server, so that people can visit it, and chat with other users. It runs on Windows 98, too! The user interface is simple. It can be switched to Windows 3.11-style interface, if you wish. Bugs: Choure Chat has some bugs. The server doesn't close when the client is started. It starts up as the server, and the server continues running in the background until it's explicitly shut down. If the server is started by the client (ie. when someone clicks 'Connect' in the client) then the server will not be started, and the client will not be able to connect to it. Bugs that occur in the client or server should be reported in the corresponding discussion forum. Feedback: Please send me your feedback. I welcome any suggestions or criticisms. Thanks for using my software. Choure Chat Bug/Feedback Threads:
